

# Package: checkLuhn (via r-universe)

September 10, 2024

**Type** Package

**Title** Checks if a Number is Valid Using the Luhn Algorithm

**Version** 1.1.0

**Description** Confirms if the number is Luhn compliant. Can check if credit card, IMEI number or any other Luhn based number is correct. For more info see:  
<[https://en.wikipedia.org/wiki/Luhn\\_algorithm](https://en.wikipedia.org/wiki/Luhn_algorithm)>.

**URL** <https://github.com/adamjdeacon/checkLuhn>

**BugReports** <https://github.com/adamjdeacon/checkLuhn/issues>

**Depends** R (>= 3.1.2)

**Imports** utils, dplyr, stringr

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 6.1.0

**Suggests** testthat

**Repository** <https://adamjdeacon.r-universe.dev>

**RemoteUrl** <https://github.com/adamjdeacon/checkluhn>

**RemoteRef** HEAD

**RemoteSha** 801c6c5b33c0bf8d4021f347710e88e656099e00

---

checkLuhn-package

*Functions and data for working with credit and debit cards*

---

### Description

Contains function for confirm if card numbers are valid and getting information about the card scheme and issuer see the repo at <https://github.com/adamjdeacon/checkLuhn>.

### Author(s)

Adam Deacon (<[adam@deaconsword.org.uk](mailto:adam@deaconsword.org.uk)>)

---

bin\_ranges

*BIN ranges*

---

### Description

A dataset containing the top level BIN ranges for card issuers

### Usage

bin\_ranges

### Format

A data frame with 48 rows:

**issuer** The card issuer

**start** start of card range

**end** end of card range

**active** Is card still available

**length** Length of PAN

---

checkLuhn	<i>Checks number is Luhn compliant</i>
-----------	--

---

**Description**

Checks number is Luhn compliant

**Usage**

```
checkLuhn(number)
```

**Arguments**

number	The number to be checked
--------	--------------------------

**Examples**

```
checkLuhn('4111 1111 1111 1111')
```

---

issuer	<i>issuer</i>
--------	---------------

---

**Description**

Attempts to return the issuer and if the scheme is still active.

**Usage**

```
issuer(number)
```

**Arguments**

number	PAN to look up
--------	----------------

**Value**

A dataframe of the issuer and if the scheme is active

**Examples**

```
issuer('4111 1111 1111 1111')
```
